Program Perspective

The use of electricity has become universal. Electricity though a good servant, may prove hazardous if due care is not exercised. Statistics show large number of all the electrical accidents result in fatality indicating it's potential of severity. Although safety is always kept in view while manufacturing electrical equipments, any error in the selection and installation, improper maintenance and ignoring the safety precautions during their use, may lead to accidents. Recent amendments in Indian Electricity Rules have incorporated many safety features with enactment of Electricity Act 2003.
